

Title : Glitched Emotions

Final Project Proposal

Alexis Hernandez

ART74 Fall 2025 - Intro to Digital Media

Date : December 4, 2025

Glitched Emotions

For my final project, I will create a series of ten glitch art images that each represent a different human emotion. Glitching will symbolize how emotions often feel unstable, overwhelming, or fragmented, similar to digital errors. By intentionally disrupting images in Photoshop, I will explore emotions like stress, joy, confusion, anger, and hope. This project goes deeper than previous work by experimenting with symbolism, layering, and digital distortion.

Inspiration #1

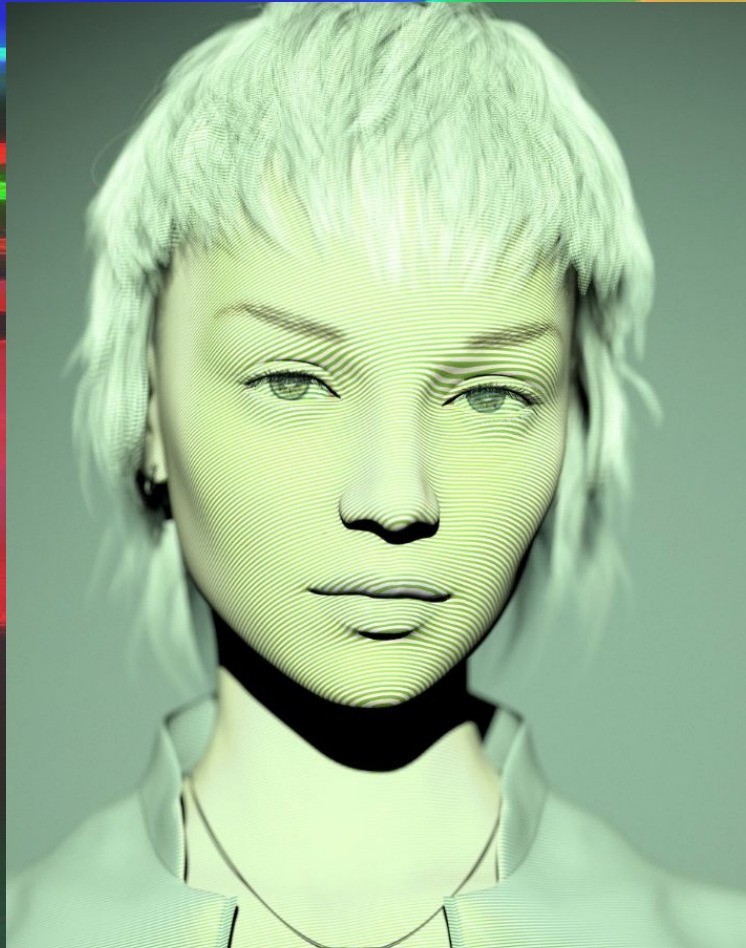

Rosa Menkmen

Rosa Menkman is one of the most famous glitch artists. She explores digital errors, corrupted images, and the aesthetics of technological breakdown. Her work fits perfectly because she treats glitches as metaphors for emotional and digital fragmentation.

Why she inspires your project:

Her approach directly connects to how emotions can feel unstable or broken, just like glitched images.

Inspiration #2

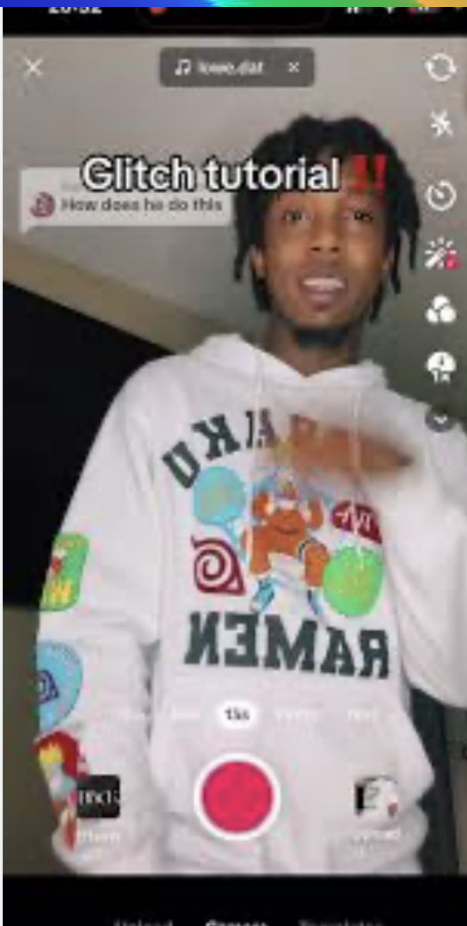

LaTurbo Avedon

A digital artist who works with virtual identity, online emotions, and distorted imagery.

Why it fits:

Your project deals with emotional distortion, and LaTurbo's surreal digital works echo that feeling.

Inspiration #3

TikTok Glitch Trends

You can use popular glitch aesthetics found on TikTok, and Instagram edits.

Why it works:

Modern glitch culture uses distortion to express anxiety, chaos, or emotional overload — exactly what your project explores.

Techniques & Materials

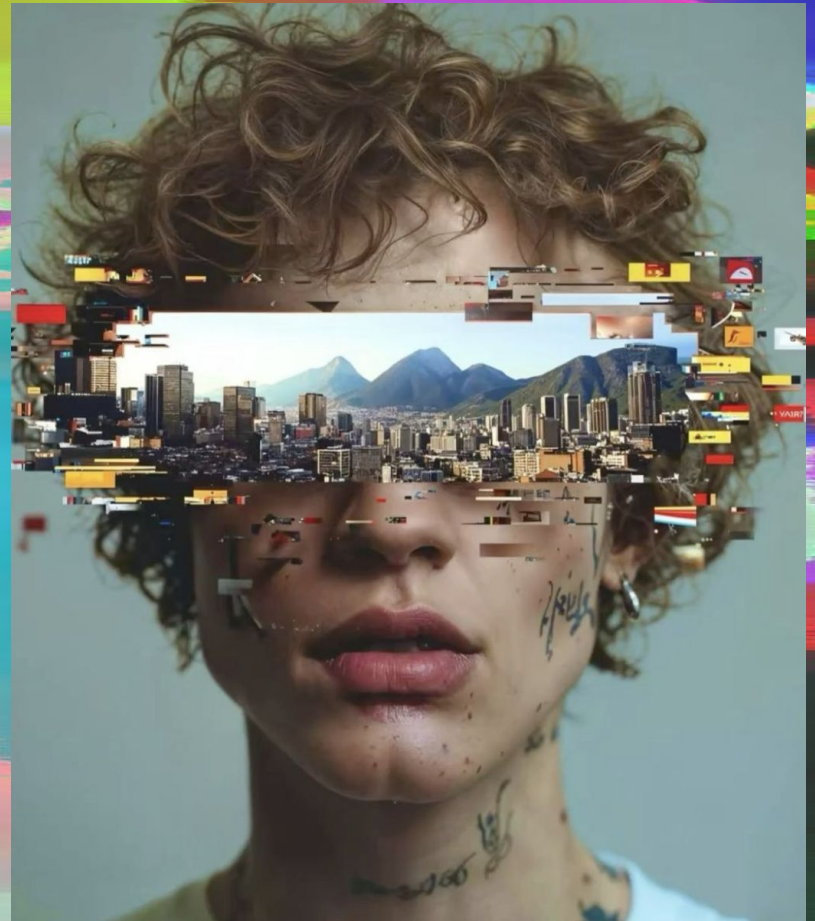

- Adobe Photoshop
- RGB color channel shifting
- Pixel stretching
- Noise overlays and grain
- Motion blur distortion
- Wave filter distortions
- Found images + digital photos

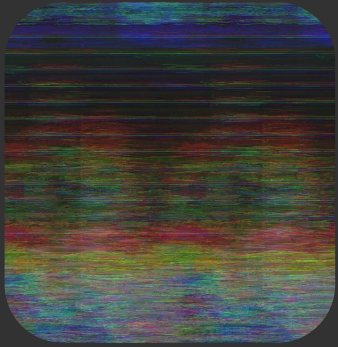

glitch

Glitch

The concept is that emotions can become "glitched" in real life—fragmented, chaotic, and sometimes unclear. Each artwork will represent a specific emotion through distortion methods aligned with that feeling. Intense emotions will appear more broken, while positive emotions will use softer digital effects.

Formal Elements

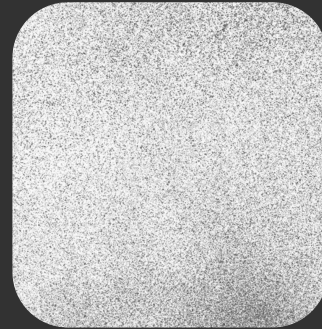

Glitch Aesthetics

Pixel textures

Strong Contrast Aesthetics

Color Manipulation

Digital Noise

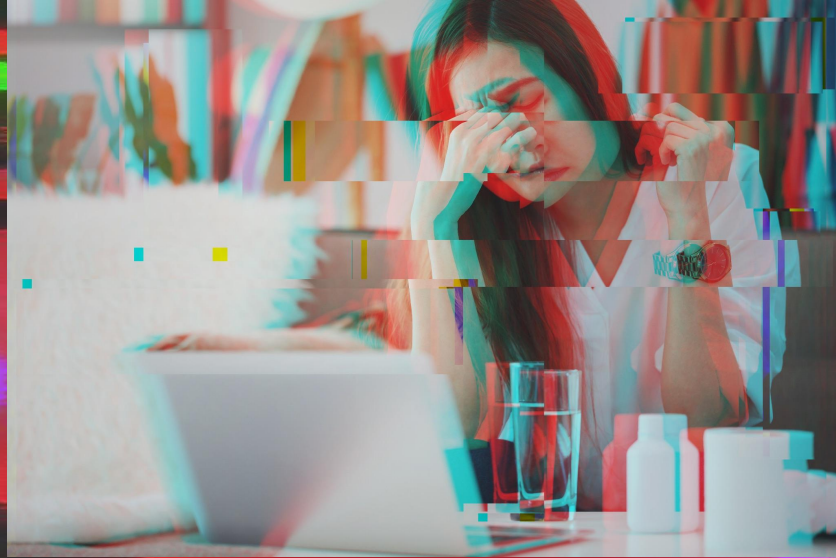

graininess (luminance noise) or
colored speckles (color noise)

Layering & Fragmentation

applying multiple layers of material,
color, texture, or imagery

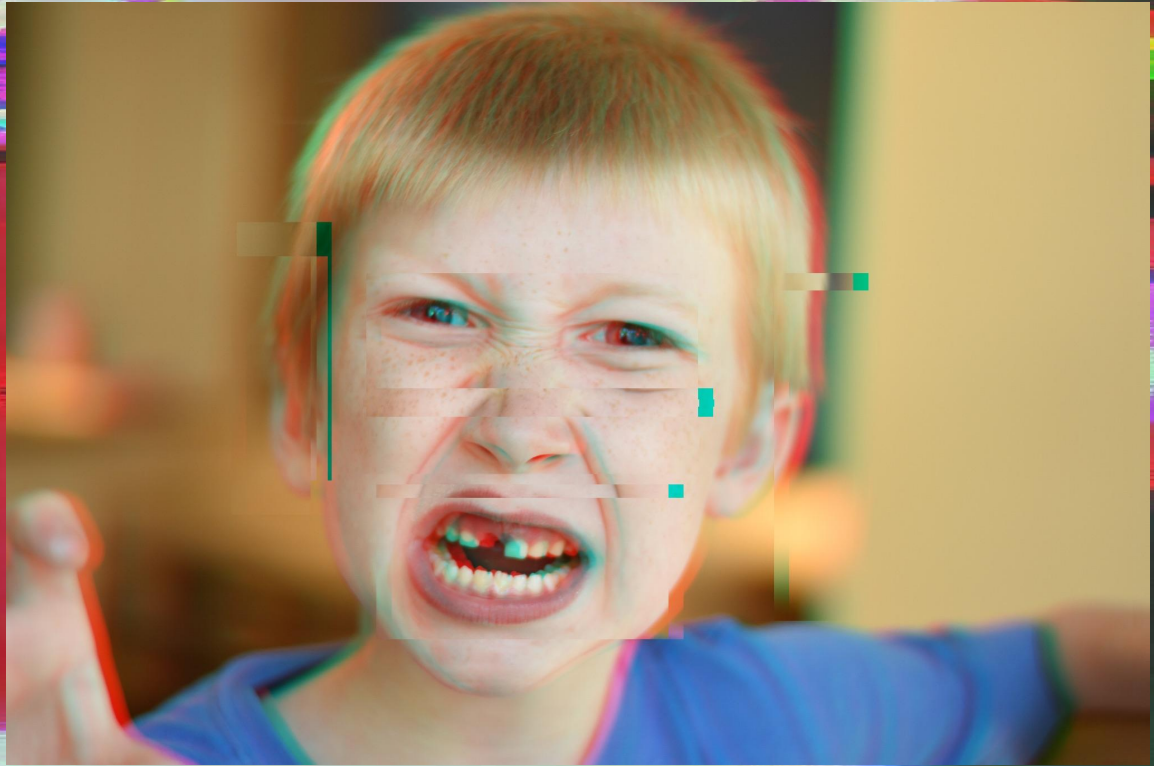

Stress Glitch Images

Confusion Glitch Images

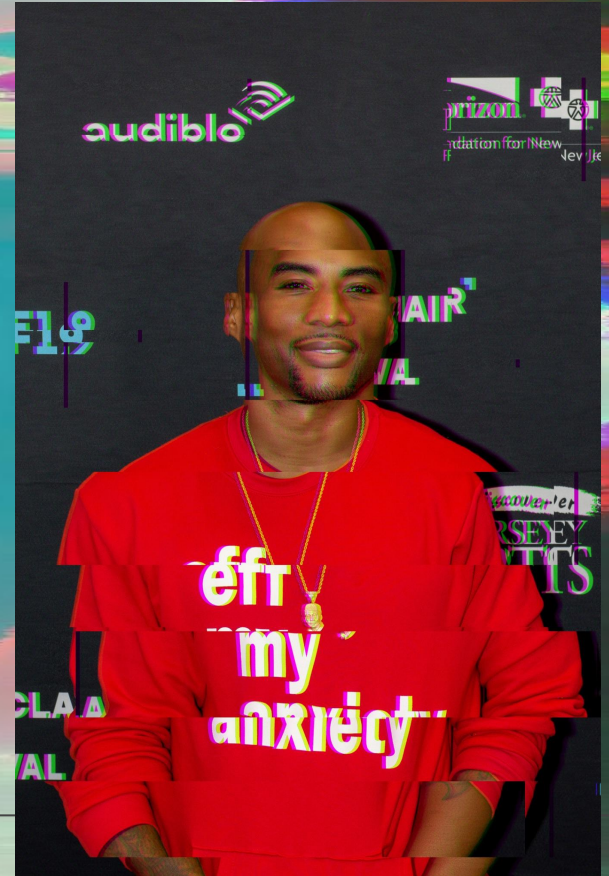

Anger Glitch Images

Sadness Glitch Images

Hope Glitch Images

**Stress, Confusion, Anger, Sadness,
and Hope:**

**These emotions were chosen because
they represent a range of positive
and negative experiences that can
be visualized through glitch
distortion.**

Reflection

This project allowed me to explore emotions through digital distortion. Glitching became a way to express intensity, instability, and emotional fragmentation. I learned advanced Photoshop techniques like RGB shifting, slicing, motion blur, and noise layering. Each artwork represents how emotions can feel "broken," chaotic, or uplifting. The process helped me understand how digital aesthetics can communicate internal experiences visually

Thank you
